

D+T Technology Platform

The software D+T runs today, one page per product: what it does, what Kāinga Ora would see of it, and how the business uses it now. The screens are taken from the platform with test data.

INTAKE AND DISPATCH

Page 2

ATC

Every work order is logged, triaged by urgency and assigned. A.I. vets it and a person decides.

REMOTE SCOPING

Page 3

Hermes

A recorded video walk-through in which the hub writes and prices the scope during the call.

SCOPING AND PRICING

Page 4

Domino

Each scope line priced against an agreed pricebook, with an auditable build-up.

SAFETY PLANNING

Page 5

Apollo

Site-specific safety plans and pre-start checklists, generated from the scope and sent to the trade's phone.

JOB COST LEDGER

Page 6

Pluto

Supplier invoices read and matched to the job they belong to, so the cost of each job is known as it is incurred.

JOB PORTAL

Page 7

Eden

Progress, photographs, documents and financials on each job, for the client and the occupant.

The job management system underneath is the system of record for every job, and D+T's own products sit on top of it.

D+T's own development team builds and supports the platform. It is built for the *Alliance* model rather than adapted from a generic product.

Every action is logged with the user and the time, and the platform is open to independent testing at any time.

Appendix B.4-2 maps how the products connect to each other and to the Kāinga Ora interface.

INTAKE AND DISPATCH

ATC

What It Does

ATC is where every work order arrives, whether through an interface, by email or from a portal. A.I. reads each one against the customer's rules and the property's history and prompts the operator, who confirms the urgency tier and assigns the work. A person decides before any work order is released to the trade network.

What Kāinga Ora Sees

Every timestamp the Performance Framework measures, recorded as the step happens, with the triage decision and who made it. Exceptions such as an unaccepted offer or a timeframe at risk surface in ATC as they occur and are actioned there.

In Use Today

ATC receives insurer and loss adjuster work by email and through their portals, threads it by claim and triages it across the business's five urgency tiers, from Double Red to Green. It is run from the Wellington and Christchurch offices.

The screenshot shows the ATC Inbox interface. At the top, there's a navigation bar with 'ATC' and 'Inbox'. Below this is a search bar with the placeholder 'Search sender, subject, message...' and a 'Filters' button. A status bar indicates '1 on shift' and '16 on record'. The main area is titled 'Inbox' and shows a list of messages. The messages are grouped by claim, with a '12 loaded' indicator. The messages include details like time, sender, subject, and actions. Some messages have a 'Works request' button and a red icon. The messages are:

- 07:54, jobs@example.co.nz, RE: Claim HO-2214 Sent from the shared mailbox.
- 07:54, claims@example-insurance.co.nz, Automatic reply: Claim HO-2214 I am out of the office.
- 07:54, Alex Kingi, Example Adjusting, Claim HO-2214 - scope documents Attached. (Works request button)
- 07:54, other.person, Northern Adjusters, Claim HO-2214 - 12 Example Street Unrelated message that happens to share a subject.
- 08:54, Site Foreman, RE: Claim HO-2214 - 12 Example Street Scope will be done Thursday. (3 replies)
- 07:54, Alex Kingi, Example Adjusting, Thanks - appreciated. (3 replies)
- 07:54, Alex Kingi, Example Adjusting, Hi team, can you get a scope together for the water damage at 12 Example Str... (Works request button, 3 replies)

The ATC inbox: messages threaded by claim, with works requests identified as they arrive.

The screenshot shows a claim thread in the ATC interface. At the top, there's a search bar with 'Example Street' and a 'Filters' button. A status bar indicates '1 of 1 on ATC'. The main area shows a list of messages. The messages include details like subject, urgency tier, and actions. The messages are:

- Certificate of Practical Completion - 9 Scr... The Certificate of Practical Completo... (3 replies)
- RE: Claim HO-2214 - 12 Rata St Scope attached wit... (Orange urgency tier, Urgent flag, 3 replies, JR icon)

A claim thread carrying its urgency tier (Orange), the urgent flag and the scope attached.

REMOTE SCOPING

Hermes

What It Does

Hermes scopes a property in one visit. A trained field technician walks the property on a recorded video call, typically about ten minutes long, while a hub user writes the scope and prices it in *Domino*. A plumber, electrician or builder joins the call when one is needed, and the scope is finished before the visit ends.

Hermes proposes scope lines as the walk-through happens. When the call ends it reviews the recording, lists the rooms it saw and flags anything it thinks was missed.

What Kāinga Ora Sees

The recording, its transcript and any 3D capture stay with the work order. Kāinga Ora can see what was viewed, what was discussed with the tenant and what was priced, line by line, on any job, and is welcome to join the call on larger works.

In Use Today

On insurance work, one person in the field completes eight to ten scopes a day with *Hermes*. Before *Hermes*, a scoper managed about four visits a day, and each quote took about two more hours to write up and price.

The screenshot displays the Hermes remote scoping interface. At the top, it shows 'Hermes > Scope #1018'. The main section is titled 'Scope #1018' with an 'Actions' button. Below this, the status is 'Exported', last updated on Sep 16th at 9:27am, and updated by John Quinlivan. The output mode is 'Duncan & Taylor'. A button 'Add Scope of Works' is visible. Below this, there are two buttons: 'Add photos' and 'Choose from media'. A note states: 'Photos placed here print at the top of the Scope of Works PDF, before the first Area. For a standalone set of photos, use the Photo Schedule.' The 'AREA SCOPE' section shows 'Kitchen' with a dropdown arrow and a warning icon. Below this, a text box contains 'Removal and replacement of 12 m2 vinyl floor coverings, substrate preparation, and' with a 'Read More' link. On the right side, there is a sidebar with a 'Live' button (37), 'Chat', 'History', 'Scans', and 'People'. A 'Start a Virtual Scope' button is present with the text 'Opens the room for the on-site phone to join.' Below this, there is a 'Accept all 3 Areas' button. The sidebar also shows a 'Post-assessment review' section with a list of items: 'Hermes is looking closer - about 60 seconds', 'I'm now focusing on defining the strict JSON format for the ...', 'Verify property construction year and commission asbestos testing prior to vinyl...', and 'The scope covers the required floor uplift and subfloor drying well, though the live assessment call had no transcript recorded. Operators must verify the dwelling age to arrange asbestos sampling of the vinyl backing before uplift, and check if a subfloor polythene ground vapour barrier is required.' The sidebar also shows a 'CALL Virtual Scope' section with '2 suggestions' and 'Preparing the recording...'. At the bottom of the sidebar, there is a 'Check timber skirting profile to confirm standard availability or requirement for custom machining' item.

A scope after the call: the areas seen, the review and the suggested checks, ready for *Domino*.

SCOPING AND PRICING

Domino

What It Does

Domino prices a scope line by line against an agreed pricebook and keeps the build-up behind every line. For Kāinga Ora the pricebook is the Schedule of Rates and NSA material pricing: each line is coded and shows its build-up, and only those lines can be selected.

What Kāinga Ora Sees

A priced scope submitted through the interface with its evidence, and the build-up behind any line whenever it is asked for. Scoping variance is tracked per scope against the 15% accuracy measure (KPI 2.01).

In Use Today

Domino prices the business's insurance scopes against each client's agreed rates, with A.I. summaries and a warning on any line that is incomplete. An approved quote is published straight to the job management system.

The screenshot displays the Domino software interface for Quote #146. At the top, a breadcrumb trail shows 'Domino > Quote #146'. The main header for the quote includes the title 'Quote #146' with edit and favorite icons, and an 'Actions' dropdown menu. Below this, key details are listed: 'Status' is 'Draft', 'Last Updated' is 'Monday, 8:27pm (2 days ago) (2 edits)', 'Updated By' is 'Domino A.I.', and 'Output Mode' is 'Duncan & Taylor'. A 'QUOTE SUMMARY' section follows, containing a text box with the scope description and a 'Read More' link, along with a checkbox for 'Use A.I. to produce a summary of this section'. Below the summary, a 'SECTION SCOPE' section shows 'Kitchen Joinery and Cabinetry' with another 'Read More' link and a similar A.I. summary checkbox. On the right side, a sidebar menu contains links for 'Quote Builder', 'Chat', 'History', 'Directory', 'Kitchen (1)', and 'Facilitating Works (10)'. The interface uses a clean, modern design with a light blue and orange color scheme.

A quote in *Domino*, set out by room, with A.I. summaries and warnings on incomplete sections.

SAFETY PLANNING

Apollo

What It Does

Apollo generates the site-specific safety plan and pre-start checklist from the scope and sends them to the trade's phone. The plan covers hazards, hazardous substances, task analysis and the toolbox talk, and the site checks come back to the same record.

What Kāinga Ora Sees

The safety plan and the completed pre-start for any job, with the site check record behind it, alongside the hazard and tenant-risk information Kāinga Ora supplied with the work order.

In Use Today

Apollo produces a site-specific safety plan, or a one-page SSSP Brief for short, low-risk jobs, for every job the business runs, and Alliance foremen confirm the checks on site from their phones.

SSSP J-21532

92A Miramar Avenue, Miramar, Wellington, New Zealand, 6022

Status: Scheduled

Last Updated: Sep 19th, 1:09pm (6 days ago) (18 edits)

Updated By: Apollo A.I.

Output Mode: Duncan & Taylor

Schedule: 21/09/2026 - DD/MM/YYYY

SCOPE OF WORKS

Residential building repairs, surface preparation, carpentry maintenance, and interior and exterior painting

Pre-start checks

PRE-START SITE SAFETY CHECKLIST - 92A MIRAMAR AVENUE - ACCESS, TRAFFIC & PUBLIC PROTECTION

Driveway and shared right-of-way clear of obstructions, tools, and parked vehicles

Spotter assigned and high-visibility gear ready for vehicle reversing onto Miramar Avenue

PCBU hazard board and visitor sign-in register erected at main entrance

Physical barriers and warning signage in place to segregate domestic living areas from trade works

Footpaths, access steps, and ramps free of slip hazards, moss, and loose cables

PRE-START SITE SAFETY CHECKLIST - 92A MIRAMAR AVENUE - PLANT, TOOLS & EQUIPMENT

All power tools inspected for undamaged casings, functioning switches, and intact

Everything here saves as you go.

JOB COST LEDGER

Pluto

What It Does

Pluto is the cost ledger for each job. Supplier invoices that arrive by email are read, classified and matched to the job lines they belong to, so the cost of every job is known as it is incurred rather than at month end.

What Kāinga Ora Sees

Open-book cost records that reconcile line for line to the work orders Kāinga Ora has funded. As Pluto is extended, Kāinga Ora representatives will be able to see and report on the costs of their own jobs directly.

In Use Today

Pluto reads the business's incoming supplier invoices and sets aside any it cannot yet match, so the accounts team resolves exceptions rather than keying every invoice. Its reporting views are being built now.

Pluto > Dangling Invoices

Dangling Invoices 3

All types ▼

All matches ▼

PROVENANCE	TYPE	MATCH
P5W dangling courier invoice "P5W dangling courier invoice" · received 23 Aug NZ\$450.00 incl GST	none ▼	no match

Supplier invoices waiting to be matched to a job, with the amounts read from each invoice.

JOB PORTAL

Eden

What It Does

Eden is the portal where the client and the occupant follow a job: progress against the schedule, photographs, documents and financials, and messages to the team running it.

What Kāinga Ora Sees

Kāinga Ora representatives can watch any job in *Eden* as it happens. We would like to extend it to every property in the Zones we win, and to give tenants access if Kāinga Ora wants it.

In Use Today

Insurers, loss adjusters and homeowners follow their jobs in *Eden*, and the business's support site documents it for them.

A job in *Eden*, with its site details and contacts.
